

# HOOGENDOORN AUTOMATION

**AUTOMATION FOR  
UNDER £400 !**

Hoogendoorn Automation are pleased to introduce their new **ENVIRO system**, which can introduce many of the advantages of Hoogendoorn's well-known ECONOMIC climate control systems for larger sites to smaller sized sites as well - at a fraction of the cost.

The ENVIRO is a small, flexible and easy-to-operate climate controller - ideal for poly tunnels, garden centres and for the smaller to medium-sized glasshouse grower, who may want to automate his site for the first time, or simply improve existing controls.

Software modules available within the ENVIRO include Heating, Ventilation, Humidity Control, Air Circulation and Cooling, Screening, Lighting, Fogging, Irrigation, CO<sub>2</sub>, Boiler Control and an Alarm Program – all the features of a more sophisticated system in one compact unit.

All of these software modules, together with the supplied I/O of the ENVIRO, are freely addressable to suit the end user's specific requirements and budget, unlike some other controllers where one 'box' for instance can only control ventilation, and you need another 'box' for your screens. ENVIRO's ability for simple programming of the I/Os available make it possible to control whatever you want, and within however many zones you need, giving it enormous flexibility.

A clear and informative LCD display keeps you informed of both internal and external conditions at a glance, whilst the simple-to-use keys make changing settings easy.

End users can choose one or more sensors, or even a complete Weather Station to complement their system, and to protect ventilation systems from high winds, rain and frost.

**Flexibility, value for money and ease-of-use all in one compact unit – contact us today for more details on how the ENVIRO could help improve YOUR business!**
