Nomad Penta – The paperless glasshouse

Nowadays, every grower has to record a lot of information. And the amount of information is ever increasing. As a result of this, it is very important to make the data recording process as easy as possible. It is much too complicated to first write your data on a piece of paper and then record these data by entering them into a computer. Instead, just enter the data at any place in the nursery and automatically into the main computer. This is exactly what Hoogendoorn **Nomad** does. **Nomad**: the only wireless recording system for the horticultural industry.

Besides, the Nomad system is very flexible. It's up to you to decide which actions have to be recorded and what has to be registered exactly.

Lately, Hoogendoorn introduced the Nomad Penta. Penta is Greek for the word 'five'. Nomad Penta provides you with maximum five Nomad keys. If this amount of keys is sufficient for your company and the connection to the scales/balance system is not necessary yet, then Nomad Penta is the best choice you can make. Enjoy all the advantages of a Nomad system, but then for a very low price!

Hoogendoorn Firewall A safe connection to the Internet

The Hoogendoorn Firewall will prevent your computer from all criminal actions on the Internet. Your computers will be completely safe behind the Firewall. Besides, the Hoogendoorn Firewall is a virus scanner that checks all the mails that pass the

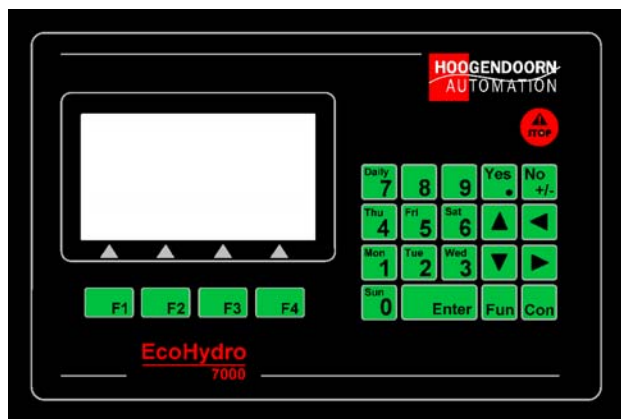

firewall for viruses. That means a lot if you are aware of the fact that there are more than 80.000 viruses on the Internet! The Firewall is also a SPAM filter that is able to keep unwanted e-mails from your computer. The VPN (Virtual Private Network) is also a possibility to be build with the Hoogendoorn Firewall.

E-NEWS

ECOHYDRO

The EcoHydro is a standalone processor unit for the control of irrigation and fertilisation, including conductivity regulation, pH regulation, valve control via time and volume, fertiliser mixing, pumping, filter cleaning and drainage. Furthermore, EcoHydro features a breakdown and fault detection system, including a complete visualisation of data. The basic model consists of 40 independent outputs, plus 16 inputs for digital signals and 16 analogue inputs, which can be extended at any time in the future.
